#### Elements Of Data Science - F2024

#### Introduction to Data Science Tools

09/09/2024

#### **TODOs**

- Read Preface of PDSH
- Read Ch 1 of PDSH
- Skim Ch 2 of PDSH: Introduction to NumPy

• Weekly Quiz 01

## **TODAY**

• Software tools we'll be using

#### Our Python Data Science Stack

- Python (3.10): Programming language
- Anaconda: Package maintenance and environments
- Jupyter: IDE
- Git: Source control and versioning

#### Aside: The Terminal and The Shell

```
andi — -bash — 80×24
Last login: Mon Sep 11 06:32:30 on ttys001
The default interactive shell is now zsh.
To update your account to use zsh, please run `chsh -s /bin/zsh`.
For more details, please visit https://support.apple.com/kb/HT208050.
(base) Andis-MBP:~ andi$ conda activate sigma2
(sigma2) Andis-MBP:~ andi$ ls

Requirement already satisfied: notebook>=6.0 in ./miniconda3/envs/sigma2/lib/pyt
hon3.8/site-packages (from RISE) (6.5.2)
```

If not familiar, get aquainted

#### **Aside: Common Shell Commands**

- cd : change directory
- pwd: where am i
- **Is**: list directory contents
- head/tail: print the beginning/end of a file
- cat: print entire file
- less: open a file in a pager
- rm: remove file
- which: path to executable
- ...

Link to Tutorial

#### Data Science Life Skills

- Data munging
- Visualization
- Statistical analysis
- Machine learning
- Reporting
- Prototyping
- Productionizing...

## Why Python?

- Robust and active DS stack
- Cross-platform
- Relatively low learning curve
- Fast to answers and prototypes

• Many other good languages and frameworks (R, Julia, etc.)

## Why Python?

- But isn't python slow?
- Issues:
  - dynamic typing
    - The Python interpreter does type checking only as code runs, and the type of a variable is allowed to change over its lifetime.
- Solutions:
  - numpy + vectorization
  - multiprocessing
  - distributed processing with pyspark?

```
In [15]: 1 a = 'andi'
In [16]: 1 type(a)
Out[16]: str
```

## The Python DS Stack

- Data munging: pandas, numpy
- Visualization: matplotlib, seaborn, plotly
- Statistical analysis: scipy, statsmodels, patsy
- Machine learning: scikit-learn, tensorflow, pytorch
- **Reporting**: jupyter+ipython, dash
- **Prototyping**: flask
- Productionizing...

# Python 2 vs 3

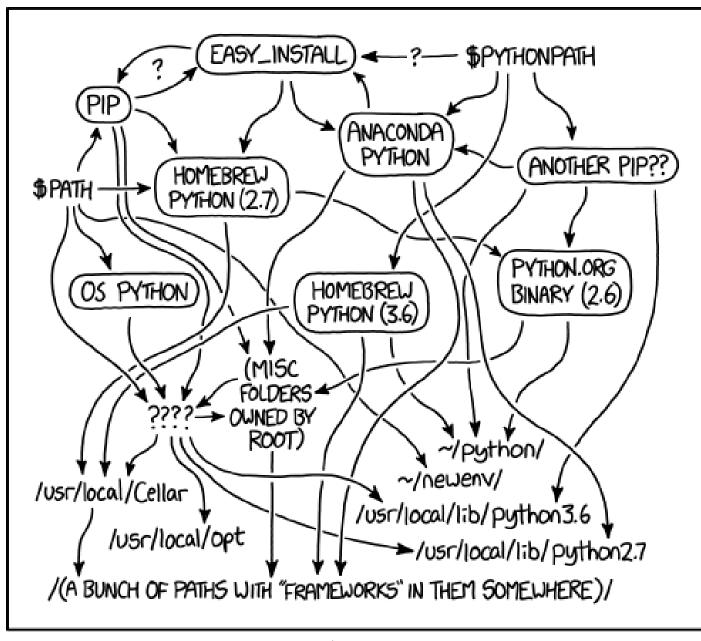

- We'll be using Python 3.10
- Python 2 end of life was Jan 1, 2020

• Need python 2 for another class? Virtual environments!

# **How To Get Python**

- You might already have it
- But your OS needs it!
- Our solution: Anaconda

#### Why Anaconda?

MY PYTHON ENVIRONMENT HAS BECOME SO DEGRADED THAT MY LAPTOP HAS BEEN DECLARED A SUPERFUND SITE.

# Why Anaconda?

- includes most of what we need by default
- package curation
- dependency control
- conda virtual environments
- cross-platform

## Installing Anaconda / Anaconda NAvigator

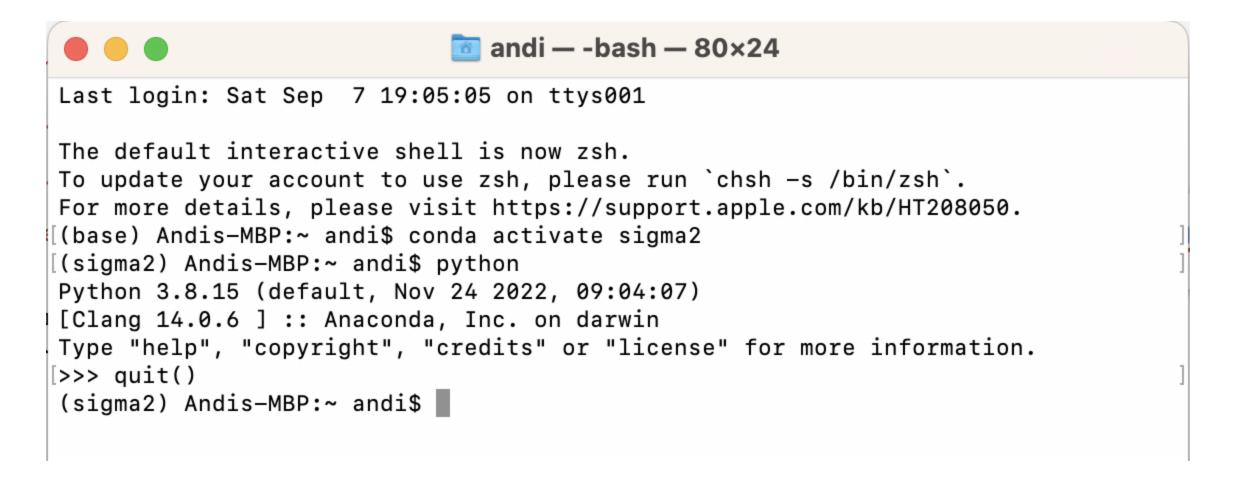

- Download via <a href="https://www.anaconda.com/products/individual">https://www.anaconda.com/products/individual</a>
- Select OS and Grab Python 3.9 version
- Install somewhere easy to navigate to
  - /home/andi/anaconda3
  - C:\Users\andi\anaconda3
- Recommend letting installer run conda init to set up your shell
- Note: base environment activated by default
  - To Turn off: conda config --set auto\_activate\_base false

# Running Python

- via terminal:
  - python REPL
  - python command line
  - python script
  - ipython REPL
- via jupyter
- via other IDE
- online via Google Colab
- ...

#### Running Python

- Via REPL (Read–Eval–Print Loop)
  - \$ conda activate
  - (base)\$ python

• quit() or Ctrl-D to exit

## Running Python

Via command line

```
(base) Andis-MBP:~ andi$ python -c "print('hello')"
hello

Viascript

(base) Andis-MBP:~$ echo "print('hello from the other file')" > /tmp/say_hello.py
(base) Andis-MBP:~$ python /tmp/say_hello.py
hello
```

#### **Ipython: Interactive Python**

- history (python does this now as well)
- tab completion (python does this now as well)
- "magic" commands
- help via ? (python has help() as well)
- (see PDSH Ch 1 for more info)

#### Ipython: REPL and Help

• \$conda activate if (base) not activated

```
andi — IPython: Users/andi — ipython — 80×14

[(base) Andis-MBP:~ andi$ ipython
Python 3.10.8 (main, Nov 24 2022, 08:09:04) [Clang 14.0.6 ]
Type 'copyright', 'credits' or 'license' for more information
IPython 8.15.0 — An enhanced Interactive Python. Type '?' for help.

[In [1]: print('hello')
hello

[In [2]: len?
Signature: len(obj, /)
Docstring: Return the number of items in a container.
Type: builtin_function_or_method

In [3]: []
```

```
In [1]: 1 # The output of the `echo` can be redirected to a file instead of displaying it on the
2 # terminal
```

```
In [1]: 1 # The output of the `echo` can be redirected to a file instead of displaying it on the
2 # terminal

In [6]: 1 !echo 'print("hello from Room 833, Sep 2024")' > /tmp/say_hello.py
2 !python /tmp/say_hello.py
hello from Room 833, Sep 2024
```

```
In [1]: 1 # The output of the `echo` can be redirected to a file instead of displaying it on the

2 # terminal

In [6]: 1 | lecho 'print("hello from Room 833, Sep 2024")' > /tmp/say_hello.py
2 | lpython /tmp/say_hello.py
hello from Room 833, Sep 2024

In [7]: 1 %run /tmp/say_hello.py
hello from Room 833, Sep 2024
```

```
In [1]: 1 # The output of the `echo` can be redirected to a file instead of displaying it on the
         2 # terminal
In [6]: 1 !echo 'print("hello from Room 833, Sep 2024")' > /tmp/say_hello.py
        2 !python /tmp/say hello.py
        hello from Room 833, Sep 2024
In [7]: 1 %run /tmp/say_hello.py
        hello from Room 833, Sep 2024
In [8]: 1 %timeit sorted([5,1,2,5])
        174 ns \pm 6.22 ns per loop (mean \pm std. dev. of 7 runs, 10,000,000 loops each)
In [9]: 1 %%timeit
        2 \times = []
        3 for i in range(20):
               x.append(i**2)
        3.57 \mus ± 103 ns per loop (mean ± std. dev. of 7 runs, 100,000 loops each)
```

## Help with Magic Commands

• get information about the %timeit magic function

%timeit?

• get info on all magic functions

%magic

• get list of magic functions

%lsmagic

#### Ipython Notebooks with Jupyter

- Jupyter: application that combines code, markup and visualizations
- interact via web browser
- notebooks are easily sharable
- Jupyter can run other kernels as well: R, Julia, C#, etc.
- To launch via command line:

```
(base) Andis-MBP:~ andi$ cd ~/proj
(base) Andis-MBP:~ andi~/proj$ jupyter notebook
```

- launches dashboard in your default browser
- Ctrl-C to kill server

#### Other IDEs

- jupyterlab
- spyder
- pycharm
- visual studio code ...

# **Arguments for Notebooks**

- fast to iterate
- easy to test new ideas
- wide adoption

## Arguments against notebooks

- out of order execution
- messy code
- issues with version control
- slides by Joel Grus

#### How to deal with version issues? Virtual Environments

- encapsulate python executable and packages
- allow for easy experimentation
- workaround versioning issues
- two major implementations: virtualenv and conda (we'll be using conda)

#### Virtual Environments with Conda

Example for creating a new environment called py2 with python=2.7:

```
(base) Andis-MBP:~ andi$ conda create -n py2 python=2.7
...
(base) Andis-MBP:~ andi$ conda activate py2

(py2) Andis-MBP:~ andi$ which python
/Users/andi/miniconda3/envs/py2/bin/python
```

- (py2) Andis-MBP:~ andi\$ python --version Python 2.7.18 :: Anaconda, Inc.
- (py2) Andis-MBP:~ andi\$ conda deactivate
- (base) Andis-MBP:~ andi\$ which python
  /Users/andi/miniconda3/bin/python
- (base) Andis-MBP:~ andi\$ python --version Python 3.10.8

#### Managing Conda Environments

- conda create -n [env\_name]
- conda create -n [env\_name] [package] [package]=[version]

• conda env create --file [requirementsfile].yml

- conda activate [name]
- conda deactivate

• conda env list

• For more information see: <a href="https://docs.conda.io/projects/conda/en/latest/user-guide/tasks/manage-environments.html">https://docs.conda.io/projects/conda/en/latest/user-guide/tasks/manage-environments.html</a>

# Installing New Packages

• Again, don't want to mess with system packages!

## Installing New Packages

- Again, don't want to mess with system packages!
- 1. first, try conda (with conda-forge):

```
conda install -n [env_name] -c conda-forge [package]
```

2. next, try another channel: eg. bioconda

```
conda install -n [env_name] -c bioconda [package]
```

3. then, try pip:

```
conda activate [env_name]
pip install [package]
```

## Installing New Packages

- Again, don't want to mess with system packages!
- 1. first, try conda (with conda-forge):

```
conda install -n [env_name] -c conda-forge [package]
```

2. next, try another channel: eg. bioconda

```
conda install -n [env_name] -c bioconda [package]
```

3. then, try pip:

```
conda activate [env_name]
pip install [package]
```

when you can, double check the path to your env

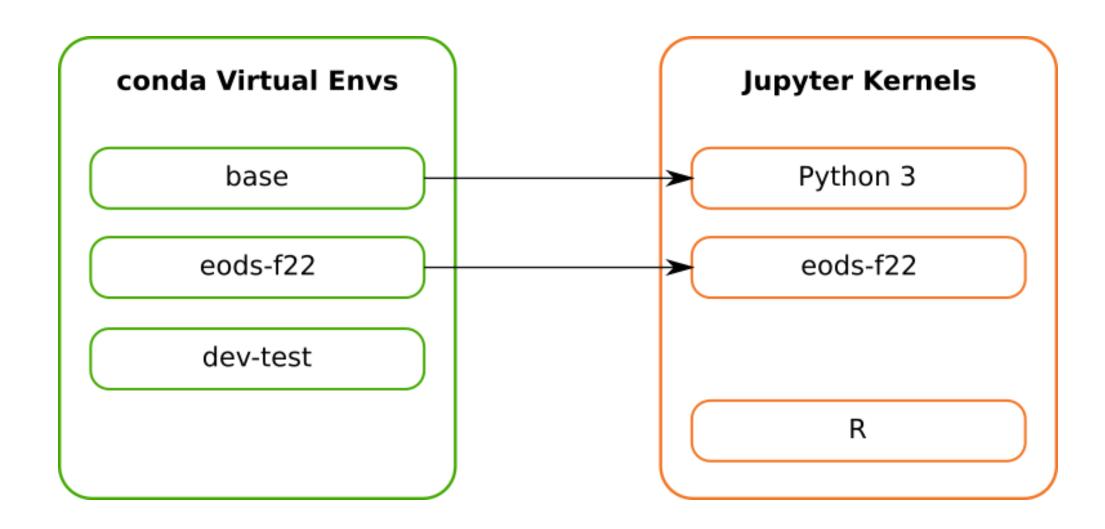

# Conda Channels: default vs conda-forge

- channels: locations where packages are stored
  - default: Anaconda terms specify only used in non-commercial application
  - conda-forge: where all of the good stuff is anyway

```
conda install -n [env_name] -c conda-forge [package]
```

# Conda Virtual Envs and Jupyter Kernels

- jupyter can run many different kernels
- conda envs not automatically added as available kernels

## Controlling Jupyter Kernels

• to install a new kernel in jupyter:

```
(base) $ conda activate py2
(py2) $ conda install -c conda-forge ipykernel
(py2) $ python -m ipykernel install --user --name py2
```

• to list kernels: jupyter kernelspec list

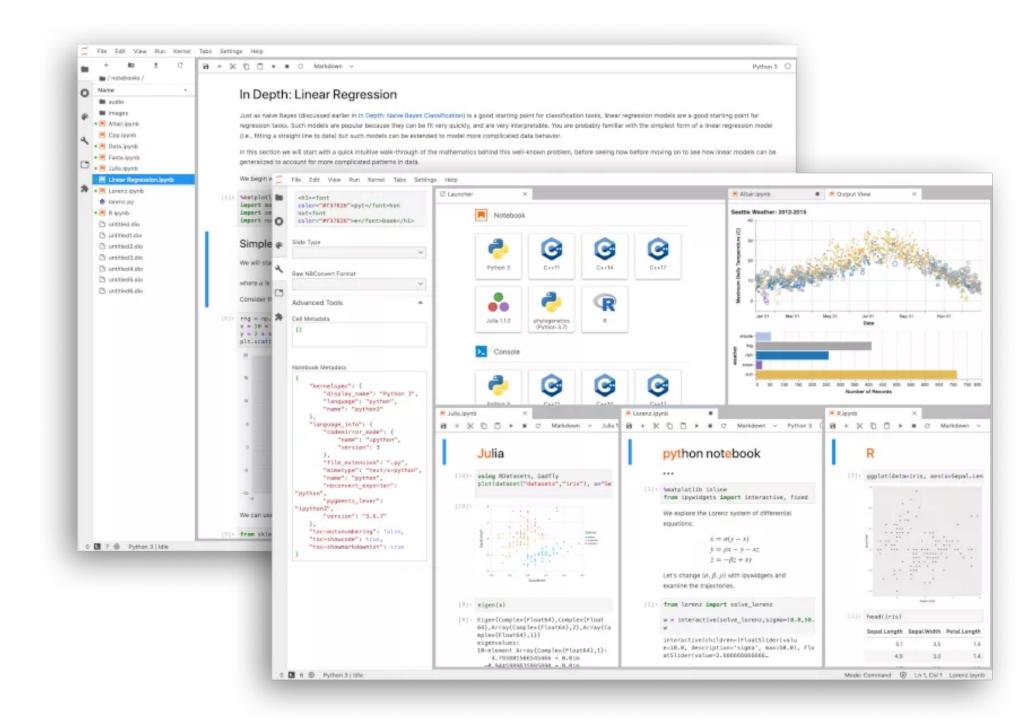

• to remove kernel: jupyter kernelspec uninstall [name]

# **Jupyter Demo**

- Important: h for help
- Markdown syntax help: <a href="https://daringfireball.net/projects/markdown/syntax">https://daringfireball.net/projects/markdown/syntax</a>

### Jupyter Classic vs JupyterLab

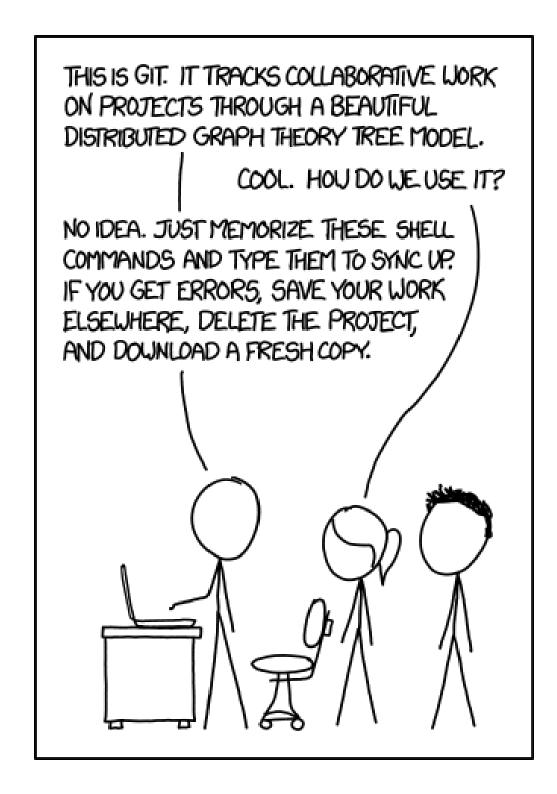

- start as either jupyter notebook or jupyter lab
- or replace http://localhost:8888/tree with http://localhost:8888/lab

# **Example Notebooks**

Gallery of interesting Jupyter Notebooks

#### Git and Github

#### Git

- distributed version control
- for code, documentation, small data
- can be used locally or with remote collaborators

### Github

- backup
- sharing
- used for both large and small projects
  - Ex: <a href="https://github.com/scikit-learn/scikit-learn/">https://github.com/scikit-learn/scikit-learn/</a>

## Getting course material

- Can view online at: TBA
- You'll also want to clone locally:

```
$ cd [your projects folder]
$ git clone **TBA**
```

# Demo Week 1 Quiz

# Questions?

• Next time: Python review, numpy and pandas
